

## Mobile app services provide instant information anytime, anywhere

Mobile applications are changing the nature of the computing industry. At Atkins we are capitalizing on our years of experience in the engineering, design, and planning arena to bring the benefits of the mobile platform to today's infrastructure industry needs.

Today's fast-paced environment demands systems that allow access to information anywhere and to work seamlessly in connected and disconnected environments. Using Smartphones or tablets, our solutions allow members of your team to access enterprise information systems for exchanging and processing critical data with only a few taps on their mobile device.

Our skilled team of developers offers versatility to our clients by supporting the creation of mobile apps on a variety of platforms including:

- Google Android OS
- iOS (iPad/ iPhone)
- Blackberry
- Windows Mobile
- Windows Phone 7

### At Atkins we provide:

- Customized mobile applications
  - Intuitive design
  - User-friendly themes and icons
  - Data visualization and mapping integration (e.g., geographic information systems [GIS], GPS, and Google Maps)
- Web service development integration
- Network compatibility with major carriers
- Web-based development with XHTML, DHTML, AJAX, and CSS
- Native platform development in Java or Objective-C using XCode
- Support and development for a variety of handheld and tablet devices
- Testing on emulators and physical devices to ensure proper functioning of the app
- Application and database maintenance services
  - Routine updates/releases based on approved change requests
  - Database changes and optimization
  - Reporting
    - Performance monitoring
    - Usage monitoring
- Hosting of enterprise database for full life-cycle solution
